Solutions to match your imagination

Specialized Shading Systems is a wholesale manufacturer/fabricator of both Lutron and Somfy-based operating systems. We specialize in high-quality interior and exterior shading solutions based on cutting edge technology. We offer 40+ years of experience in shading solutions, with extensive technical knowledge and practical expertise from a team that includes PE and LEED certified engineers.

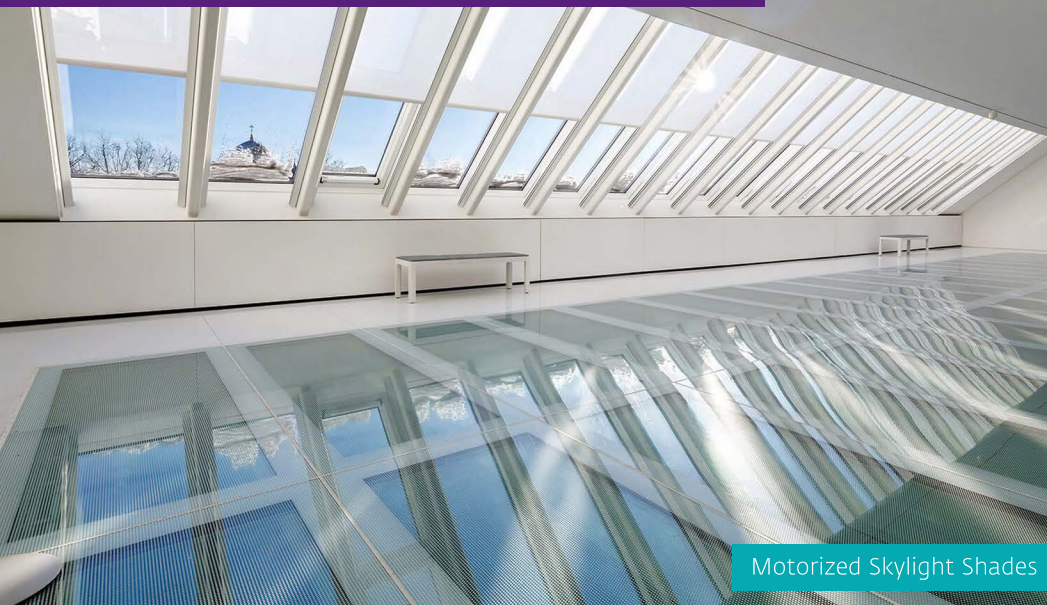

With our onsite consultation and engineering services, architects and designers can create and design options with few limitations, providing clients with solutions that are functional as well as easy to use. We combine our passion for engineering with products from worldwide craftsmen to provide aesthetic and functional solutions to your shading projects. "If there is an opening, we can cover it." Take a look inside for some of the solutions we have employed. Be inspired, tap into your creativity, and we'll design, manufacture, install the solutions to match your imagination.

Your Specialized Shading Systems Team

A low-angle, upward-looking shot of a modern office ceiling. The ceiling features a large, multi-paned skylight with a dark metal frame, through which a blue sky with white clouds is visible. The ceiling is composed of white acoustic tiles and is illuminated by several recessed, rectangular light fixtures that emit a warm, yellowish glow. A white, dome-shaped security camera is mounted on the right side of the ceiling. In the lower portion of the image, the dark, vertical panels of a wall or partition are visible, along with horizontal ventilation grilles. A teal-colored text box is overlaid in the bottom left corner.

Solar Shades

Blackout Shades

Bottom Up Shades

Suit your individual style

In addition to their functional role (privacy, lighting, view, climate environment), interior shades create ambiance and style. The right fabric, color, and type of shade will underscore the interior design and enrich it.

Shades to match your lifestyle

Our range of interior shading solutions suit any design perspective. Roman, roller and skylight shades. Wood blinds, panel tracks, draperies and conservatory shades - all available with automation.

We offer a worldwide selection of functional and decorative fabrics using sustainable materials ranging from translucent, sheer and blackout to solar screens and custom woven matchstick. We'll create the perfect shade to fulfill your design vision. Drapery tracks, straight and custom-curved, single or dual, are all available from our New York manufacturing facilities.

Exterior Shading Solutions

Sun Shades

Retractable Louvres

Sail Shades

Roll Shutters

Motorized Exterior Zipper Shades

Control daylight and heat before it even hits the window

Exterior shading significantly reduces heat gain and glare - allowing you to save energy and control interior climate more efficiently. Popular in Europe, the trend is gaining ground here, with Specialized Shading Systems leading the way. We support architects and designers who are implementing LEED into their designs

The ideal combination of functionality and beauty

A shading solution must complement the architectural style yet fulfill functional requirements. Fabric density and color substantially alter the amount of light, affecting visibility and privacy. Dedicated to the art and science of covering openings, Specialized Shading Systems has window covering systems and options for every application.

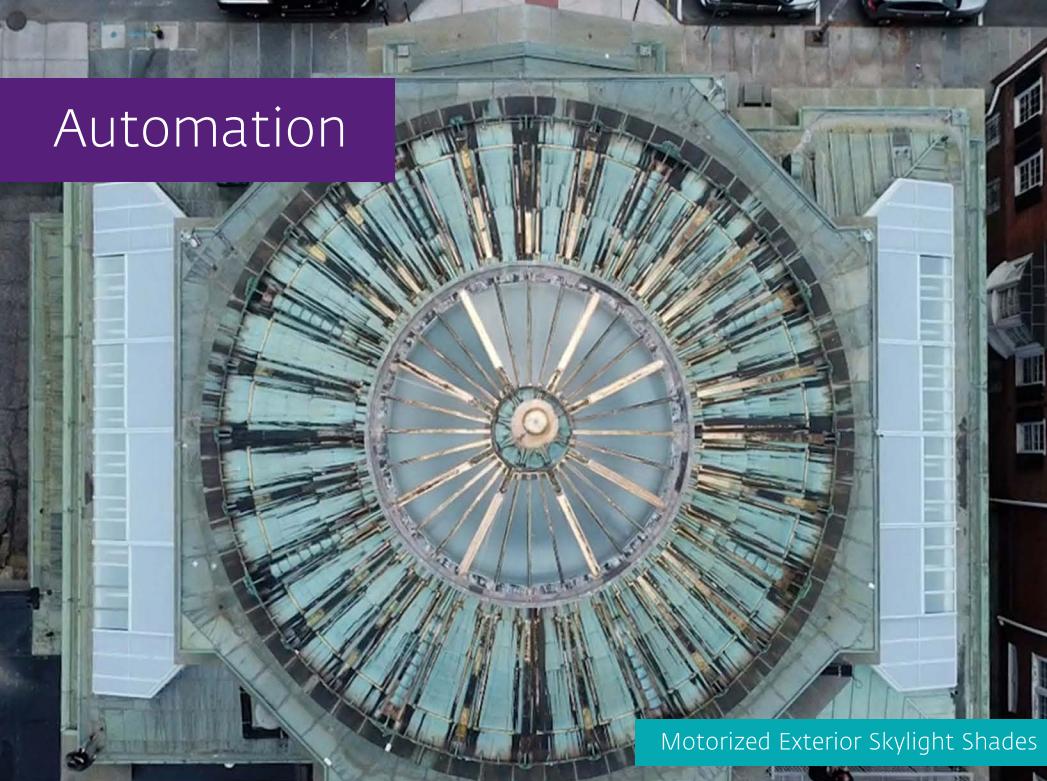

From awnings to zipper shades

Our production portfolio offers a wide variety of exterior shading options; from awnings to large zipper shades, from multiple motorized shades to a single skylight. The Specialized team of engineers will help you devise the perfect shading solution integrating cutting edge technology with "intelligent" fabrics

Create a stylish extension to a home while enjoying the beauty of outdoor living with shades that retract or louvers that rotate

Automation

Motorized Exterior Skylight Shades

With the push of a button or the touch of a mobile app

Large shades, multiple shades, shades in places that are inaccessible, all have unique challenges. Automation is the simple solution. Operate one or more shades seamlessly with the push of a single button, or from an app on your smart phone. Our vast inventory of ultra-quiet Lutron and Somfy motors allows us to provide fast production and delivery.

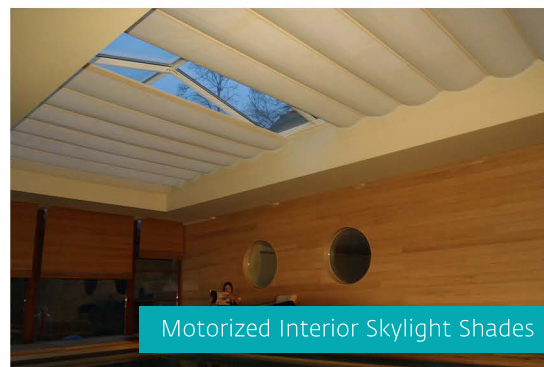

Make it smart

Combine automated shades with sun and wind sensors or integrate them with home automation to create an intelligent shading system. Enjoy maximum convenience, energy efficiency, protection, privacy, and safety. Program your shades to automatically close when the sun appears to protect artwork and furniture from UV damage. Program them to go up or down to provide privacy or to highlight the view.

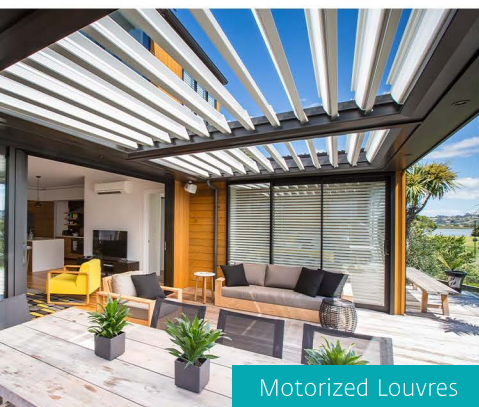

Museums, office buildings, commercial spaces and luxury homes benefit from the efficiency of light harvesting and light management. Automation controls light more efficiently in hard to reach, large glass window walls, conservatories and skylight applications.

Solar Shades for Skylights

Whatever shape... Whatever size

Embracing the latest technologies

Specialized Shading Systems is an industry leader when it comes to innovative shading solutions with our LEED certified engineers. We will custom design and engineer the ideal solution for any size or any shape of any opening: Triangle, oval or arch; interior or exterior - all can be motorized for easy operation.

State-of-the -Art

In our continual quest for the most innovative ways to cover openings, Specialized is proud to offer a state of-the- art solution for windows and skylights of any degree of angle. The ZipperLock tension system with side lock fabric retention mechanism means the shade can be deployed horizontally, vertically, bottom up or even side to side. Since the fabric is tensioned at all times, it can even be stopped at any position while still retaining its stability. The ZipperLock locks the fabric inside the guide enabling it to operate as a shading or blackout solution for horizontal, vertical and sloping surfaces.

Specialized Shading Systems

Windows: the defining elements of unique architecture

Windows play a key role in today's architectural design – they make a building breathe and connect it to the environment. Architects continue to get evermore creative, designing unique buildings with larger expanses of glass, unusual shaped windows and openings in the most unexpected places. Specialized Shading Solutions continues to work hand-in-hand with them, creating solutions to match their imagination.

Rethink your limitations

We have been assisting architects and designers for decades, creating optimal shading systems for their designs. By being involved in a project from its inception, we can prevent unnecessary delays and costly design changes. We'll customize a shading system with respect to the architecture.

Conservatories

Roman Shades for Conservatories

Bringing the outdoors in

The conservatory is an architectural centerpiece that comes with a few practical challenges. Managing the light and regulating room temps while preserving the options of daylight and view require a customized shading system.

Cutting-edge technology and passion for custom solutions

With over 40 years of experience in engineering and installing specialty shades in conservatories from small to large, in homes or in commercial applications, combining a variety of specialty fabrics and automation, we have become the recognized industry leader.

We are passionate about creating shading solutions that offer maximum convenience and flexibility while seamlessly integrating with the architecture. A well-designed shading system means you'll enjoy your conservatory even more and at the same time protect valuable interior furnishings.

Zipper Shades

Zip it!

Zipper shades can fit any rectangular opening and can be installed on the interior or exterior. The zipper holds the fabric in tension between two opposing side channels at all times, fitting many applications: top down, bottom up, or even inclined or horizontal orientation.

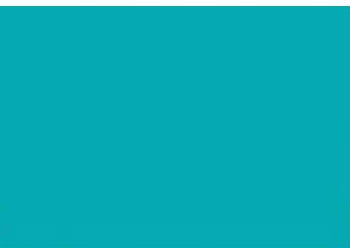

Innovation

We pioneered the use of zipper shade technology for interior applications to avoid many of the issues associated with traditional side tracks.

We stock aluminum shade boxes and side channels for your convenience at our New York facility.

Solar to black-out

Our zipper shades are available with different types of solar screen fabrics and in a variety of colors. No-light fabric will create true black-out as the zippered sides of the fabric traverse the side channels.

ScreenaMax

Extra-large and ultra compact with zero deflection

Our team is proud to offer newly designed, extra-large and ultra compact ScreenaMax zip screens from the Pangaea Collection. Spanning up to 23' wide and housed in a discrete, 4 1/8" cassette, these screens hang perfectly flat with zero deflection using award-winning technology from ZOOMTECH®.

ScreenaMax uniquely covers large spaces while remaining discrete by featuring minimalistic cassettes, extra thin tracks and non-visible fasteners.

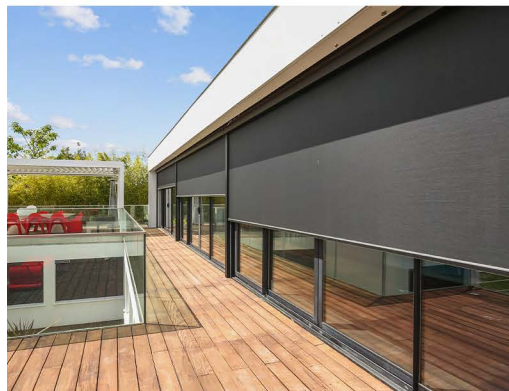

These shades are suitable for interior and exterior applications including blackout.

Three RAL colors are included in our standard collection, however practically any RAL color can be made available upon request courtesy of our in-house powder coating line.

Enjoy maximum convenience, energy efficiency, protection, and privacy without compromising style.
